SVHC Free Steel Products

Algoma Steel is an integrated steel producer based in Sault Ste. Marie, Ontario, Canada. Algoma is committed to achieving excellence in Health, Safety and Environment by providing and maintaining a safe and healthy work environment. Revenues are derived primarily from the manufacture and sale of hot and cold rolled products, including hot rolled sheet and plate, and cold rolled sheet.

REACH is a European Union regulation concerning Registration, Evaluation, Authorization and restriction of Chemicals, and is not a requirement in North America. This regulation affects companies that export to Europe, since these products must comply with the regulation.

Under REACH, the European Chemical Agency has developed a Candidate List of Substances of Very High Concern for Authorization (SVHCs). As part of Algoma's commitment to the production of safe and environmentally friendly steel products, Algoma has reviewed the SVHC list and confirms, to the best of its knowledge, that the steel products manufactured at our facility do not contain any of the 247 SVHCs as set forth by the European Chemical Agency.

REACH guidelines dictate that a North American company exporting products to the EU cannot register itself and REACH obligations must be fulfilled either by the importer or by a company established in the EU nominated as the company's representative. As a result, the registration with the European Chemical Agency of a substance covered by REACH is not the responsibility of Algoma. Information about Algoma's products and Safety Data Sheets can be found on the company's website.
